LinkFixerPlus™ *Gold*

Automatically fix links when you move or rename files!

P r o d u c t   D a t a   S h e e t

"One of our projects involved moving 30,000 Finance Department files, totaling 35 giga-bytes, to another server and restructuring the department's folders to a proper hierar-chy. If we had not found *LinkFixerPlus*, we would have had to hire a team of people to manually re-link the files, and that would have cost our company a fortune."

John Tran, Senior Manager of Infrastructure ExpressJet Airlines

Migrating files that have links that point to other files?

Many types of files, such as Excel files, contain links to other files. As a result, IT staff are often faced with the special problem of what to do when performing data migrations, server consolidations, folder reorganizations, operating system upgrades, file virtualization or document manage-ment system implementations — because as soon as files are moved or renamed, or server or folder names are changed, broken links occur.

If moving or renaming one file or one folder causes only a few broken links, then the problem is not severe. Files can be manually opened and broken links can be manually repaired. But what if moving or renaming files or folders causes dozens, hundreds or thousands of broken links?

Introducing *LinkFixerPlus Gold*

This is the problem that LinkTek's patented product,

LinkFixerPlus Gold, solves. Using *LinkFixerPlus Gold*, IT staffs can easily move or rename most common file types, along with the files they link to, in batch, and have all of the links maintained totally automatically!

LinkFixerPlus can report, manage and maintain links contained in files such as: Microsoft **Excel**, **Word**, **Power-Point**, **Access**, Autodesk **AutoCAD**, Bentley **MicroStation**, Adobe **InDesign**, **PageMaker**, **PDF** and even **HTML** files. *LinkFixerPlus* eliminates the time-consuming and tedious process of manually finding and fixing broken links.

What else can *LinkFixerPlus* do?

In addition to moving files or folders without causing broken links, *LinkFixerPlus* can:

- **Produce detailed reports:** *LinkFixerPlus* generates a variety of detailed reports showing parent files, the links pointing to child files and the status (intact or broken) of each link.

- **Safeguard healthy links in large sets of files:** Use the *LinkFixerPlus* Inoculate command to protect links in files so they can be automatically fixed should they become broken when files are moved or renamed using Windows Explorer or other utilities.

- **Find and fix broken links automatically:** The com-plimentary *LinkFixerPlus* Cure command can find and fix broken links in large sets of previously safeguarded files totally automatically.

LinkFixerPlus — benefits at a glance

LinkFixerPlus Gold gives users the ability to:

- Rename or move linked files, in batch, using sophisti-cated rename rules, without causing broken links in the parent files that point to the child files.
- Safeguard healthy links in files, allowing them to be automatically repaired should they become broken.
- Fix broken links in safeguarded files *automatically!*
- Generate a broken link report, listing all files contain-ing broken links, so they can be fixed before causing problems.
- Generate a regular report, listing each file followed by a list of the files it links to.
- Generate a cross-reference report, listing each linked file followed by a list of all the files that point to it.
- Report whether a file is being pointed to by any sup-ported file type anywhere on a user's system, thereby letting the user know whether the file is safe to delete.
- Modify links in large sets of files with a single command using sophisticated global search and replace operations.

Using *LinkFixerPlus Gold,* users can quickly, dependably and easily maintain the integrity of all the links contained within many different types of files, whether they are working with dozens of files on a desktop computer or hundreds of thousands of files during a data migration.

Parent file types supported by *LinkFixerPlus Gold*:

- .xls, .xlt, .xlsx, .xltx, .xlsb
- .doc, .dot, .docx, .dotx
- .ppt, .pot, .pptx, .potx
- .mdb
- .lnk
- .dwg, .dwt, .dxf
- .dgn
- .indd, .indt
- .pm6, .p65, .pmd
- .pdf
- .htm, .js, .css, .asp, .swf

Time and cost of finding and fixing 100,000 broken links *without using* LinkFixerPlus:

- Estimated project hours: 2,500 hours
- Estimated hourly cost: $30.14
- Total estimated cost: $75,350

Time and cost of locating and repairing 100,000 broken links *using* LinkFixerPlus:

- Actual project time: Under 5 hours
- Estimated hourly cost: $30.14
- Total estimated cost: $151

Dean Health Systems saved $75,199 on this one project alone, a savings of 99%! By using *LinkFixerPlus*, the daunt-ing task of repairing over 100,000 links was done quickly and efficiently.
